Adaptive Braille learning												
McCarthy et al. (2016) [60]	SCED	10	Higher									▲

▲ favours technology ▼ favours comparator ◄► no clear difference, mixed or conflicting (direction coded without statistical significance).
 Marker size: n ≥ 50, 10–49, < 10 learners with disabilities. Fill: black = lower risk of bias (RoB 2 some concerns; ROBINS-I moderate; WWC meets with reservations); grey = higher risk (high/serious; does not meet WWC); white = not assessable (abstract only). NRS = non-randomised or within-participant; SCED = single-case experimental design.
